DETAILED ACTION

Election/Restrictions

1. Newly submitted claim 14 is directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

The invention of claims 6-13 (further referred as invention **A**) and invention of newly added claim 14 (further referred as invention **B**) are distinct because inventions A and B are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the information reproducing apparatus for reproduce data from a recording medium having copyright and disc regions information and does not requires the specific configuration of disc and contents of the same provided in the disc to perform the reproduction. The subcombination has separate utility such as provides a recording medium having a burst cutting area which includes an application identifier area, an application specific data area and a data length area for recording an application identifier, control data and a data length, wherein the identifier indicates the use of the control data.

Art Unit: 2655

Furthermore, the invention of previously cancelled invention claims 1-5 (further referred as invention **C**) and invention of newly added claim 14 (**B**) are distinct because, inventions B and C are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention B has separate utility such as providing the use of the control data recorded in an application specific data area. Furthermore, invention C has separate utility such as, providing a recording medium for a reproducing apparatus a burst cutting area by removing a reflective layer of the disc in a stripped shape, a data recording area for recording user data and further providing at least one burst cutting control information area. See MPEP § 806.05(d).

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claim 14 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Allowable Subject Matter

2. Claims 6-13 are allowed.
3. The reasons for allowance with respect to claims 6-13 are the same reasons as set forth in the notice of allowance mailed in 08/05/2004.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. This application is in condition for allowance except for the presence of claim 14 to an invention non-elected in consideration of the above matter.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
